

Kohleschleifstücke

| | Seite |
|---|---------|
| Schleifstücke für Krane und Oberleitungsfahrzeuge, z. B. Obus-Schleifstücke | 1 - 6 |
| Plattenförmige Schleifstücke für Stromabnehmer | 7 - 14 |
| Plattenförmige Schleifstücke mit Kabel für Stromabnehmer | 15 - 17 |
| Dreikant-Schleifstücke für Stromabnehmer | 18 |
| Schleifstücke und Kontakte für Kleinschleifleitungen, z. B. Stromschienen, Bagger usw. | 19 - 34 |
| Erdungskontakte und Kleinschleifkontakte | 35 - 39 |
| Kohlekontakte für Schalter, Schütze und Aufzüge | 40 - 49 |
| Kontaktrollen für Regeltrafos und Regelwiderstände | 50 - 52 |

STROMABNEHMER AUS KOHLE

Hartkohle-Qualitäten Metallgraphitkohle-Qualitäten Metallimprägnierte-Qualitäten

Kohleschleifstücke für Stromabnehmer aller Art haben sich durch ihre hervoragenden Eigenschaften auf fast allen Gebieten durchgesetzt und glänzend bewährt. Die früher verwendeten Buntmetallstromabnehmer hatten einen großen mechanischen, sowie elektrischen Verschleiß infolge Lichtbögen, die zu Schmelzperlenbildung führten.

Unsere Qualitäten sind den jeweiligen Anforderungen angepaßt, insbesondere hinsichtlich der Abnützung der Kohle und aüßerster Schonung des Fahrdrahtes, welcher bei Verwendung von Kohleschleifstücken mit einem graphitreichen Schutzfilm überzogen wird und die Reibung und damit die Abnützung wesentlich mildert.

Infolge dieser glatten Gleitflächen werden Lichtbögen und Rundfunkstörungen vermieden.

Unsere Kohleschleifstücke sind mit einem wasserabweisenden Mittel imprägniert, um die schädlichen Einflüsse von Feuchtigkeit auszuschalten, bei Einsatz im Freien.

Durch Niederschläge, mitgeführte Verunreinigungen oder salzhaltige Luft, werden auf dem Stromabnehmer chemische Reaktionen frei, die sich schädlich auswirken.

Der Anpreßdruck variiert entsprechend dem jeweiligen Verwendungszweck, z. B. Kranbahnen, Grubenbahnen, O-Busse, S-Bahn und Transportanlagen in weiten Grenzen von etwa 30 - 100 N.

Als Anpreßkraft für den Linienkontakt empfehlen wir ca. 15 N, für den Flächenkontakt ca. 5 N/cm² min.

In dieser Liste sind nur die gängigsten Typen aufgeführt. Wir stellen selbstverständlich auch jede gewünschte andere Ausführung her und bitten in diesem Falle um Einsendung von Mustern oder Skizzen.

CURRENT COLLECTORS OF CARBON MATERIAL

Carbon inserts have obtained high reputation on account of their excellent characteristics. The former used nonferrous metal current collectors had a big mechanical and electrical wear due to arcs, which caused welding beads.

Our qualities have been adopted to the individual demands, especially with regard to abrasion of the carbon and extreme careful teatment of the bus bar line, which is covered with protective film of high graphite contents, resulting in an essential decrease of friction and thus wear.

Arcs and radio interference suppression are thus avoided.

Carbon current collectors cannot be used, if the bus bar line is made of light metal material.

Our carbon inserts are supplied impregnated with a water-repellent liquid as to avoid harmful influences caused by humidity.

Chemical reactions which show bad influences become free by precipitation, by pollution or salty ambient conditions.

The pressure is varying in vast limits of 3 to 10 kgs., corresponding to the individual application, i.e. cranes, mine traction motors, trolleybusses, subways and transport equipment.

This list contains standard items only; besides those listed we manufacture any further requested performances.

FROTTEURS EN CHARBON POUR PRISES DE COURANT

Les frotteurs en charbon pour prises de courant se sont imposés et ont fait leur preuve dans un très grand nombre de domaines, à cause de leurs multiples qualités.

Dans le passé, l'emploi des frotteurs en métaux non-ferreux était courant, mais leur usure rapide tant électrique que mécanique incita l'utilisateur à les remplacer par des frotteurs en charbon.

Nos qualités sont conformes aux multiples exigences, spécialement en ce qui concerne l'usure du frotteur et le ménagement du fil trolley, qui sera recouvert par un filin protecteur graphité, réduisant au minimum le frottement, donc l'usure.

Ces surfaces de frottement lisses évitent l'arc électrique ainsi que les perturbations radiophoniques.

Tous nos frotteurs en charbon sont imprégnés, évitant ainsi toute pénétration d'humidité.

Les précipitations, l'entraînement de saletés, ou d'autres nuisances, l'air salin peuvent provoquer des réactions chimiques nuisibles sur le frotteur.

La pression sur le frotteur peut varier suivant son utilisation, par exemple; sur ponts-roulants, locos de mine, trolleybus, métro, installations diverses de transport, entre 3 et 10 kg.

Ce catalogue ne présente que les types les plus courants.

Pour toute éxécution autre que celles qui en font l'objet, prière de nous consulter à l'appui de dessin ou modèle.
